Microwave Signal Generators | Microwave Power Amplifiers | Microwave Power Measurement

Founded in 1980, Giga-tronics Incorporated (Nasdaq “GIGA”), an ISO 9001 and AS 9100 certified company, headquartered in San Ramon, California, is a leading engineering-and-design manufacturer of best-in-class RF and microwave signal generators, microwave power amplifiers, USB power sensors, microwave power meters and broadband switching matrices. R&D, production and test managers, scientists, engineers and technicians, around the world, use Giga-tronics test equipment to realize higher productivity and greater ease of use in many applications: ATE systems, aerospace & defense, communications and general microwave component test.

Table of Contents

Microwave Signal Generators	pg. 3
Microwave Power Amplifiers	pg. 6
Power Measurement – USB Power Sensors	pg. 8

Scalar Network Analysis	pg. 12
ATE Switching and Microwave Components	pg. 13
Service, Contact and Order Information	pg. 14

Overview:

The Giga-tronics Microwave Signal Generators provide state-of-the-art performance with fast switching speed and high output power without any compromise in signal purity. Giga-tronics offers the 2500B series Microwave Signal Generators with frequency ranges to 50 GHz and ultra-low phase noise. The Giga-tronics Microwave Signal Generators are fast, easy-to-use, super clean and loaded with features including high-stability time base, fine resolution, multiple sweep modes and a full suite of analog modulation capabilities.

Applications:

- Aerospace and Defense R&D, Manufacturing and Maintenance
- Signal Simulation for Radar and EW Testing
- Microwave Communications R&D and Manufacturing
- ATE for Higher Through-put, Lower Cost of Test
 - Data-intensive Applications
 - Antenna Testing
 - Satellite Payload Testing
 - RFIC & MMIC Testing
- Microwave Component and Assembly R&D and Manufacturing

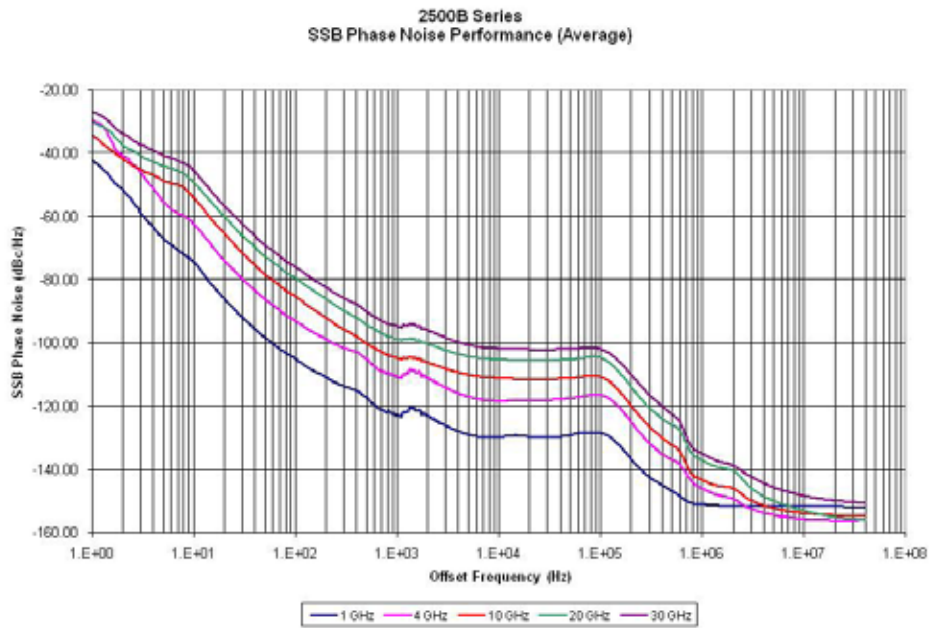

Benefits:

- Low phase noise and low spurious means clean pure signals to meet your most challenging test needs
- High output power overcomes losses in cables and signal switching
- Fast switching speed improves test through-put and provides agility for signal simulation applications
- Emulation modes available for replacement of obsolete signal generators
- Easy-to-use front panel accommodates a wide variety of user skill levels

MICROWAVE SIGNAL GENERATORS

Key Specifications:

	2500B
Frequency Range	100 kHz to 2, 8, 20, 26.5, 40 or 50 GHz
Frequency Resolution	0.001 Hz
Max Leveled Output Power	+20 dBm at 20 GHz, +11 dBm at 50 GHz
Time Based Stability	$< 5 \times 10^{-10}$ /day
Switching Speed	500 μ s per point
Phase Noise	< -109 dBc/Hz at 10 GHz and 10 Hz offset
Harmonics and Spurious	< -58 dBc

**Giga-tronics 2520 Maximum Unleveled Output Power with
Step Attenuator (Typical)**

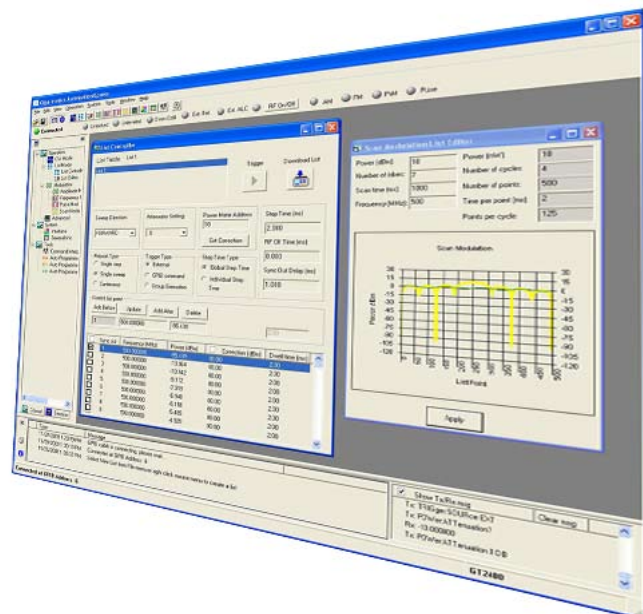

Automation Xpress: Optimized for Automated Test

Automation Xpress (AX) software is included with the 2500B series Microwave Signal Generators, enhancing the ability of ATE integrators to control and configure the signal generators to address their specific needs. AX enables easy downloads of complex lists and setup and modification of parameters, all in a familiar windows-based application. A comprehensive list mode, command-line interpreter with script and loop capability, and an auto-programming capability are just a few of the features that test system programmers will appreciate when developing and debugging Test Program Sets.

Key Features:

- Faster CW switching & list download enables faster testing and more device throughput
- Reduced cost of test - increased return on investment
- Reduce programming training and costs
- Streamlines the programming environment by ensuring consistent development
- Increase testing confidence with quality and rapid development

Overview:

The Giga-tronics Microwave Power Amplifiers offer linear high-power amplification across multi-octave bands. They are ideal for testing in EMC, wireless communications applications and Defense EW systems and broadband testing without band switching or swapping narrow band amplifiers resulting in faster and more accurate testing.

GT-1000A	2 GHz to 20 GHz
GT-1020A	100 MHz to 20 GHz
GT-1026A	100 MHz to 26.5 GHz
GT-1040A	10 MHz to 40 GHz
GT-1050A	2 GHz to 50 GHz
GT-1051A	10 MHz to 50 GHz

Key Specifications:

GT-1000A	GT-1020A / GT-1026A	GT-1040A	GT-1050A / GT-1051A
10 Watt to 8 GHz 5 Watt to 20 GHz	1/2 Watt to 20 GHz 1/4 Watt to 26.5 GHz	1/4 Watt to 20 GHz 200 mWatt to 40 GHz	1/4 Watt at 50 GHz, 1/2 Watt at 40 GHz
2 GHz to 20 GHz	100 MHz to 20 GHz / 26.5 GHz	10 MHz to 40 GHz	10 MHz to 50 GHz
Harmonics and < -60 dBc typ.	Harmonics < -30 dBc typ. Spurious < -60 dBc typ.	Harmonics < -30 dBc typ. Spurious < -60 dBc typ.	Harmonics < -30 dBc typ. Spurious < -60 dBc typ.
Gain 35 dB nom. Flatness: +/- 3 dB max.	Gain 35 dB nom. Flatness ± 2.5 dB typ.	Gain 25 dB nom. Flatness ± 2.5 dB typ.	Gain 25 dB nom. Flatness +/- 3 dB typ.
Noise Figure < 10 dB typical	Noise Figure < 5 dB typ.	Noise Figure < 6 dB typ.	Noise Figure < 10 dB typ.

Key Benefits:

- Wide frequency range eliminates the need for band switching providing reduced cost and complexity while increasing reliability
- The solid-state parallel MMIC design delivers high reliability and long life.
- Excellent linear performance with high gain, low noise figure and low intermodulation distortion (IMD)

Applications:

- Aerospace and Defense applications, including EW, ECM, ECCM, radar and satellite system signal simulation and testing
- Wireless communications and component testing
- R&D benchtop amplifier

Replace traveling wave tube amplifiers with a higher reliability, solid-state amplifier for improved noise performance and reduced Intermodulation Distortion (IMD). Test broadband devices from RF to microwave without changing transmission paths or exchanging amplifiers manually. Eliminate complex programming caused by manual switching of amplifiers during test. Do away with plugging and unplugging amplifiers in manual test stations by replacing your narrow band amplifiers with one broadband amplifier.

Pairing with Microwave Signal Generator...

The amplifiers can be paired with Giga-tronics 2500B series Microwave Signal Generator, increasing the overall output power while preserving the synthesizer's fast switching speed, modulation, and high signal fidelity.

Overview:

The Giga-tronics GT-8550A USB Power Sensors offer easy-to-use high-performance RF and microwave power measurement. High dynamic range and high accuracy make these sensors ideal for testing in wireless communication applications and Defense EW systems. The GT-8550A series feature a ruggedized body and fast measurement speed. These broadband power sensors provide easy-to-use, fast, accurate power measurement for R&D laboratory, manufacturing test and field installation and maintenance applications.

Key Features:

- Models:
 - 10 MHz to 26.5 GHz
 - CW, Modulation, Pulse
- Range:
 - -60 to +20 dBm range to 6 GHz
 - -50 to +20 dBm range to 26.5 GHz
- VSWR:
 - < 1.15:1 up to 8 GHz
 - < 1.20:1 up to 18 GHz
 - < 1.30:1 up to 26.5 GHz
- Measurement speed:
 - 2000 readings / sec typical

Key Benefits:

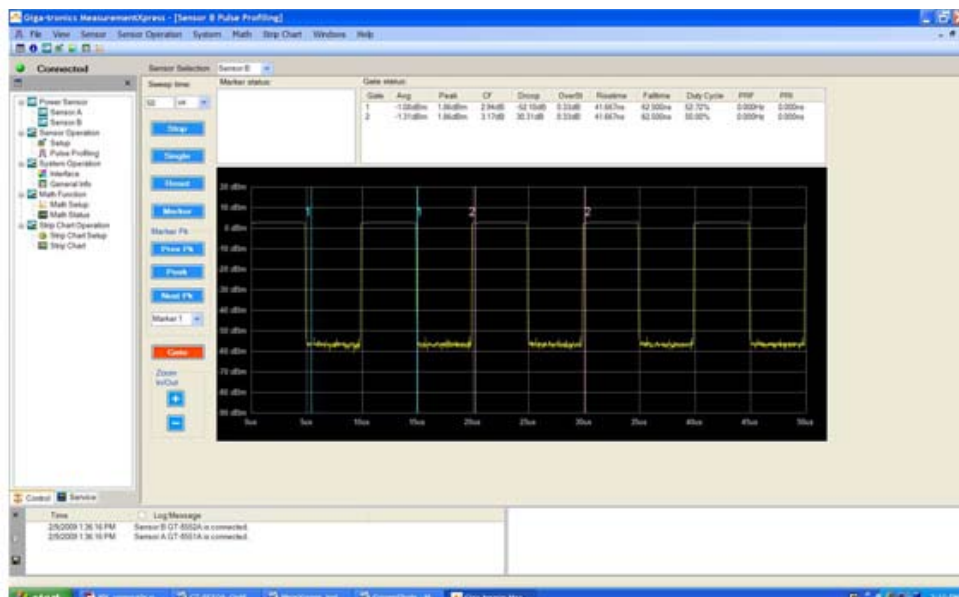

- Fully calibrated - no need to cal or zero the sensor
- Fast measurement speed saves time and increases productivity
- Saves cost and space
- Ruggedized body increases reliability, reduces damage from mishandling

Applications:

- Wireless Communications and Component Testing
- R&D laboratory and Manufacturing
- Field Maintenance and remote Monitoring

USB Power Sensors Selection Guide

Model	GT-8551A	GT-8552A	GT-8553A	GT-8554A	GT-8555A
Frequency Range	100 MHz to 8 GHz (operational to 10 GHz)	100 MHz to 8 GHz (operational to 10 GHz)	10 MHz to 18 GHz	10 MHz to 26.5 GHz	100 MHz to 20 GHz
Measurements	CW, Modulation, Average	CW, Average, Pulse (Peak)	CW	CW	CW, Average, Pulse (Peak)
Dynamic Range	-60 to +20 dBm	-60 to +20 dBm	-50 to +20 dBm	-50 to +20 dBm	-40 dBm to +20 dBm
Connector	Type N (m)	Type N (m)	Type N (m)	SMA (m)	SMA (m)

Pulse Profiling Application displays power envelope versus time

Measurement Xpress Software

The Giga-tronics GT-8550A series USB Power Sensors are designed for use with a standard PC running Microsoft® Windows XP, Vista or Windows 7. The Giga-tronics GT-8550A series USB Power Sensors include the easy-to-use application software, Measurement Xpress. The Measurement Xpress software provides a suite of measurement capabilities which include remote control and multi-channel power measurements. Features include a graphical user interface (GUI) with easily selectable multi-channel displays.

Features include a familiar windows-based graphical user interface (GUI) and optimized for multi-channel displays.

Key Functions:

- Pulse Profiling with a Full Suite of Pulse Measurements
- Modes: CW, Modulated Average Power, Burst Average Power
- Math Functions and Statistics
- Markers, Gating, Triggers and Limits
- Strip Chart

Overview:

The Giga-tronics 8651B Single-Input Power Meter and 8652B Dual-Input Power Meter offer high-performance RF and Microwave power measurement. The Giga-tronics 8650B Series Universal Power Meters have the extensive measurement capabilities and features you need to test today's sophisticated systems faster, easier and more accurately.

Key Specifications:

- Frequency Ranges to 50 GHz
- Power Ranges from -70 dBm to +47 dBm
- Low-VSWR, Peak and Modulated Average Power Sensors
- Measurement Speed up to 26,000 readings/sec

Key Benefits:

- Super-Fast 26,000 readings/sec for CW signals and over 800 readings/sec for modulated signals
- Large selection of power sensors to choose from
- Statistical analysis: Histogram, CCDF/CDF, crest factor and standard deviation
- Wide dynamic video bandwidth for measuring signals with complex modulation

Applications:

- Aerospace and Defense ATE
- Radar Systems and EW measurement
- R&D Laboratory and Manufacturing

Power Sensors

Giga-tronics' advanced power meter architecture provides for a broad choice of power sensors. Giga-tronics offers sensors for CW power, pulse power, and the peak and average of complex modulated signals. Measure power faster, more accurately, and over a wider range.

CW Power Measurement

Measure CW power from 10 MHz to 50 GHz at more than 26,500 readings per second over GPIB. Measure up to 90 dB with a single sensor, and select from a variety of high power sensors, up to 50 W.

- 80301A Series Standard Power Sensor +20 dBm to -70 dBm, 10 MHz to 40 GHz
- 80310A Series Low VSWR Power Sensor, +26 dBm to -64 dBm, 10 MHz to 40 GHz
- 80320A Series High Power Sensor, +30 dBm to +47 dBm (1 W to 50 W), 10 MHz to 40 GHz
- 80330A Series True RMS Power Sensor, +20 dBm to -30 dBm, 10 MHz to 40 GHz
- 81305A, -50 dBm to +20 dBm, 10 MHz to 50 GHz

Peak Pulse Power Measurement

Directly measure the instantaneous peak power level of pulse modulated signals. Use the 'sample delay' function to set the desired measurement point on the waveform. And an external scope can be used to view the profile and see the exact measurement point on the pulse.

- 80350A Series, -20 dBm to +5 dBm, 45 MHz to 40 GHz

Modulated Average Power Measurement

- Giga-tronics 80400A Series Modulated Power Sensors measure the average power of amplitude modulated, burst modulated and other complex modulated signals, such as GSM and TDMA signals.
- Giga-tronics 80701A Modulated Power Sensors provides a modulation bandwidth up to 10 MHz to measure the peak and average power of wide band, third-generation CDMA signals up to a 80 dB range.

Overview:

The Giga-tronics 8500A Series Peak Power Meters combine CW power measurement with the ability to make precise peak power measurements at any point on a pulsed waveform. This built-in capability lets you make CW measurements and analyze pulsed waveforms with a single instrument.

Key Specifications:

- Rise time < 15 ns
- Sensor frequency range from 0.03 or 0.75 to 18.5, 26.5 or 40 GHz
- Power Range: -20 to +20 dBm Pulse; -40 to +20 dBm CW
- Measurement resolution is 100 ps

SCALAR NETWORK ANALYZER

Overview:

The Giga-tronics 8003 Precision Scalar Analyzer combines a 90 dB wide dynamic range with the accuracy and linearity of a power meter in a single instrument.

Key Specifications:

Measures active and passive components with power meter accuracy from 10 MHz to 40 GHz. AC and DC detection is available with equal accuracy on the 3 inputs and standard, high-power, true RMS, low VSWR and triggerable pulse power sensors are available. Additionally, precision CW return loss bridges are available.

- Sensor frequency range from 0.01 to 18, 20, 26.5, or 40 GHz
- Dynamic Range: 90 dBm; -70 to +20 dBm CW; -20 to +20 dBm Pulse
- Linearity of ± 0.02 dB (0.5%) over any 20 dB span
- Linearity of ± 0.04 dB (1%) over the entire 90 dB span

From Off-the-Shelf to Tailored Solutions

... meet your demanding requirements

Giga-tronics designs and manufactures over 200 modular ASCOR brand switch products with a frequency range from DC to RF/microwave to 67 GHz and lightwave and the capability to switch from low-level to high-power signals. The ASCOR line offers a complete range of switch and digital I/O modules for communication, industrial, medical, scientific, and military/aerospace automatic test applications. If there is not already an off-the-shelf product to meet your requirements, Giga-tronics offers tailored solutions available quickly at off-the-shelf-prices.

MICROWAVE SYNTHESIZER MODULES, YIG FILTERS AND YIG OSCILLATORS

Our core technologies in microwave signal generation and filtering have enabled us to design unique integrated electronic assemblies for leading aerospace and defense, test and measurement, and communications companies. These include special microwave synthesizers, integrated microwave front ends, exciters, wideband, ultra-low noise YIG oscillators and fast-tuning and highly accurate YIG filters. Many of our products and technologies are customizable for new military programs and commercial applications.

SERVICE

Finding Solutions...

... the experts for RF/Microwave Test & Measurement

Giga-tronics offers engineering and technical expertise to help you gain the maximum return on your investment. At Giga-tronics, we understand the challenges you face. We help you achieve both top-line growth and bottom-line efficiencies by working to identify your precise needs and implement smart and result orientated solutions. Our support services are tailored to assist your team with integration and next-generation product and process technology.

SUPPORT

Repair Service

All repairs are certified and traceable to NIST, and include calibration to published factory specifications

- ISO-9001:2008 with AS9100 Certification
- Repair record retention
- 90-day repair warranty
- Factory-authorized hardware, firmware, and software upgrades, as applicable

Calibration Services

All calibrations are processed in full accordance with ANSI-Z-540-1 1994, ISO 10012, and MIL-STD-45662

- Calibrations performed against same specifications used in original manufacturing of the instrument
- All test equipment is traceable to NIST
- ISO-9001:2008 with AS9100 Certification
- Adjustment as necessary
- Certificate of calibration with list of standards is supplied
- Calibration sticker with next calibration due date is supplied
- Calibration seal is affixed to the instrument
- Calibration test data report
